Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 4-9 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Loo {US Pat. 5,373,077}, in view of Buese et al. {US Pat. 5,347,028}.

Loo teaches crosslinked poly(cyclosiloxane) networks which are obtained from a hydrosilation reaction of a cyclosiloxane, according to the present formula, and a crosslinker group (see Summary of the invention; Col. 2-4 and Examples). The difference between the presently claimed invention and what the Loo reference teaches is that Loo do not teach the use of a cyclosiloxane, of the present formula, wherein the variable n is 5 or greater.

However, Buese et al. teach polycyclosiloxane, used to prepare poly(cyclosiloxane) networks, which contain at least 3 to 8 Si-O units (see Col. 3, lines 48-65).

Therefore, it would have been *prima facie* obvious to one having ordinary skill in the art, in view of the cited references above, to arrive at the presently claimed invention because Loo teaches a similar poly(cyclosiloxane) networks and Buese et al. teach polycyclosiloxanes, which contain at least 3 to 8 Si-O units, can be used to make poly(cyclosiloxane) networks. One having ordinary skill in the art, desiring to arrive at other art recognizable poly(cyclosiloxane) networks, would have been motivated to use the polycyclosiloxanes taught by Buese et al. in the hydrosilation reaction taught by Loo. Therefore, the presently claimed invention would have been obvious to one having ordinary skill in the art.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
